

AllΩStats

finding meaning, value and truth in data

AllStats is a team of statistical consultants who perform data analysis and apply statistical techniques to serve your needs. We analyse statistical data from any source, texture or context. So if you have data, then consult us at AllStats.

We can assist you with all aspects of collecting, managing, processing, analysing and interpreting your data - aiming to bring intelligence to statistics. We work in the public and private sectors with large, medium and small companies.

Our work mainly focuses on data analysis and statistical consulting; much of our experience is in handling statistics in medicine, technology and business. Our work has included statistical application of modelling, and the design, planning, running and reporting of clinical trials.

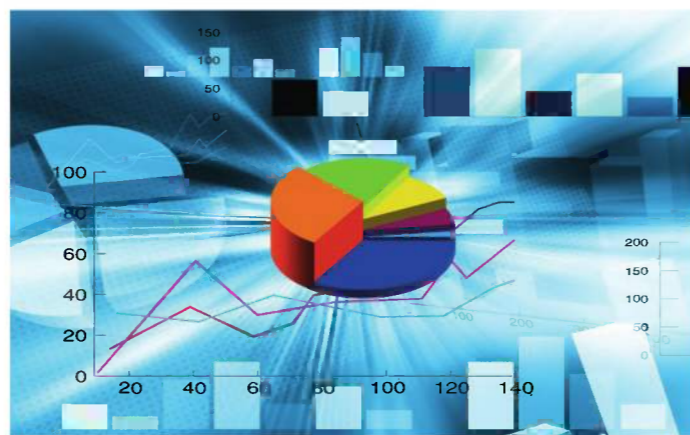

Many businesses are data rich but information poor - they are overloaded with data, sometimes almost drowning. Rather than being seen as a problem, data should be seen as a resource, a rich vein of information to be unlocked, a valuable asset to be realised.

Data is (potential) information

We apply our tools to release the power contained in your data and to bring our knowledge, expertise and experience to meeting your needs.

We convert data into intelligent information releasing inner meaning, value and truth.

A team of highly qualified statisticians and data analysts with a wide experience across an extensive range of contexts.

OUR TEAM

The team have been providing quality data analysis and statistical consultancy for many years. Our statisticians are highly qualified, most holding doctorates, and have substantial academic, research and varied consultancy experience. They have wide experience in the use of all the main statistical software packages including SPSS, SAS, CLUSTAN, MLWIN and STATA. They remain research active on a variety of collaborative projects with links to universities in the UK and the wider world.

EXPERIENCE

Our work involves extensive collaboration with professionals in many disciplines bringing to bear our extensive knowledge, wide and varied experience and professional expertise.

The assistance we have provided has ranged from general data analysis, statistical modelling, survey development (from design and sampling to detailed analysis and full report production), time series, simulation studies, longitudinal data analysis, survival models and randomisation tests.

SERVICES

Data analysis

This is the core of our activity. We undertake general data analysis using appropriate statistical methods. We work with data of all types from small packets to processing large, complex data sets. We undertake the analysis of time series and perform simulation studies.

Statistical modelling

We carry out exploratory and testing activities to investigate potential relationships between various types of data (the behaviour of selected response variables associated with variations in explanatory variables along with estimates of levels of uncertainty).

Surveys

We are able to offer a range of services ranging from study planning, questionnaire design through to full administration of data collection and analysis for report production.

Training

We have wide experience of providing training both at the individual level and through running bespoke short courses for companies. We offer flexibility, clarity and professionalism in running programmes at all levels.

FEES

We invite you to make an initial contact to discuss your needs and to allow us to present our way of assisting you.

Every project is different, often because the nature, quality and quantity of your data varies widely. We have found it is most effective to have an initial discussion of your needs and how we might assist you. Once we have a full understanding of your requirements, we will provide you with a fixed price quotation and an estimate of the time needed to complete the work.

CASE STUDIES

We have experience of analysing data in a wide variety of contexts and invite you to visit our website where further details can be found of a range of case studies across the following contexts:

- Pharmaceutical
- Medical
- Survey
- Scientific Research
- Psychology
- Animal Behaviour
- Local Authority
- Education
- Training
- Environmental
- Aviation
- Market Forecasting
- Development of Metrics

INVITATION

We are based in Oxford but can provide our services to you wherever you are. If you have any questions about details of any of our services, or would like to discuss your needs, without commitment, please contact us.

We look forward to hearing from, and doing business with, you soon.
